DETAILED ACTION

1. The text of those sections of Title 35, U.S. Code not included in this section can be found in the prior office action.
2. The prior office actions are incorporated herein by reference. In particular, the observations with respect to claim language, and response to previously presented arguments.
3. Acknowledgment is made of a claim for domestic priority under U.S.C. § 120 (application number 09/113,233 filed on July 10, 1998).
4. **The terminal disclaimer** filed on 04/26/2004 disclaiming the terminal portion of any patent granted on this application has been reviewed and is accepted. The terminal disclaimer has been recorded.
5. Claims 1-22 are pending.

Response to Arguments

6. Applicant's arguments filed 04/26/04 have been fully considered and they are persuasive.

Allowable Subject Matter

7. **Claims 1-22 are allowed.**
8. The following is an examiner's statement of reasons for allowance:

Art Unit: 2132

Markowski (5,506,905) cited by applicant (paper number 2) teach authentication method and system for secure mutual authentication between two entity using public/private key and generation of random numbers for encryption and transmitting the output as a first value to the other terminal, decrypting the encrypted value and creating the second value for transmission.

However Markowski method and system singly or in combination with other prior art are in contrast with the specific steps of the invention where a consumable authentication protocol for validating the authenticity of an untrusted authentication chip, includes the steps of: generating a secret random number and calculating a signature for the random number using a signature function, in a trusted authentication chip; encrypting the random number and the signature using a symmetric encryption function using a first secret key, in the trusted authentication chip and using a symmetric decryption function using the first secret key, in the untrusted authentication chip; and in the event that the two signatures match, encrypting the decrypted random number together with a data message read from the untrusted chip by the symmetric encryption function using a second secret key and returning it together with the data message to the trusted authentication chip; encrypting the random number together with the data message by the symmetric encryption function using the second secret key, in the trusted authentication chip; comparing the two versions of the random number encrypted together with the data message using the second key, in the trusted authentication chip as recited in **independent claim 1**.

9. Dependent claims 2-22 as being dependent upon Independent claim 1 and having additional allowable features therein.

Conclusion

10. Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "comments on statement of reasons for allowance."
